***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 7-20, drawn to apparatus and method of operating electronic meter, classified in class 324, subclass 142.
- II. Claims 1-6, drawn to method of calibrating an electronic meter, classified in class 702, subclass 85.

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process of using that product such as to measure the electrical energy without using the calibration step.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to William R. McClellan on 07/17/2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 2829

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
